## STANDING LEG CURL

(Part 970)

Looking for that hard-to-find Standing Leg Curl machine? Look no further! The vertical orientation of the Standing Leg Curl provides more constant gravity resistance. This allows you to really hit the “peak” of the hamstrings. Think of it as concentration curls for the back of the legs. Since its initial release, we have dialed in the cam on this unit to really take advantage of this concept.

All users will find a sturdy foundation in the large diamond plate footplate. The leg rollers, hip pad, and chest pad are made with hand-stitched, high quality upholstery. The foam coated grab handles make it easy to hang on during each and every rep. The weight stack is easily accessible, and aviation-grade cables combined with high quality pulleys keep things smooth from start to finish.

### WEIGHT STACK INFORMATION

The Standing Leg Curl comes standard with a 150 pound weight stack. It can be upgraded to 200 pounds.

54" L  
30" W  
74.25" H
