# UNILATERAL CONVERGING SHOULDER PRESS

The LeverEDGE Unilateral Converging Shoulder Press is rigidly constructed yet breaks down just enough to be able to fit through a standard 36-inch wide door. There are eight chrome-plated Olympic bar-sized weight storage pegs. These keep plates handy for quick changes between sets and off the floor for a safer gym environment.

## ERGONOMIC DESIGN

The ergonomics on this piece were thoroughly researched. We went through multiple prototypes before the biomechanics were perfected and the mechanism was simple enough to keep the pricing competitive. The unilateral movement prevents the stronger arm from compensating for the weaker one. Spring-loaded adjustment of the starting position to one of six heights in one-inch increments is quick and easy for a single user. You can also limit the range of motion if you have a pre-existing injury. Multi-grip handles are covered in closed-cell foam for comfort. Spring-assisted lever stops also do their part to keep workouts safe.

The starting weight for each lever arm is 11 pounds, so novice lifters won't be intimidated. But heavy lifters can load up to nine plates on each arm.

## BUILT LEGEND STRONG

The LeverEDGE Unilateral Converging Shoulder Press was built to last, but with simplicity in mind. The frame was designed using 3D CAD software to minimize the use of fasteners, so assembly only requires four bolts. This means easier setup, less maintenance, and extra rigidity. Heavy-duty pillow block bearings are tough as nails. They are smooth enough to never get in the way of a workout.

The seat is made from 32-ounce top-stitched vinyl and high-quality, dense foam. Two-tone powder coat and upholstery are also standard.
