UNILATERAL DIVERGING SEATED VERTICAL ROW

The LeverEDGE Unilateral Diverging Seated Vertical Row is the best way to work your back and arms without a spotter. And on this, you can do it all in a small footprint. There are four chrome-plated Olympic bar-sized weight storage pegs. These keep plates handy for rapid adjustments between sets, not to mention off the floor for a safer environment. Heavy lifters will love it because they can load up nine plates on each lever arm.

OPTIMAL ERGONOMICS & COMFORT

The LeverEDGE Unilateral Diverging Seated Vertical Row has multi-grip handles. Closed-cell foam covers each one, so they are comfortable during reps. Users with different arm lengths can take advantage of the adjustable chest pad. And there's no need for a spotter, so workouts are safe and effective on this plate-loaded piece.

LEGENDARY CONSTRUCTION & VALUE

We designed the LeverEDGE Unilateral Diverging Seated Vertical Row with simplicity in mind. The frame was designed using 3D CAD software to minimize the use of fasteners. Assembly only requires six bolts. Heavy-duty pillow block bearings are tough as nails and smooth enough to never get in the way of a workout. The frame is divided into four carefully designed pieces for extra rigidity. However, the LeverEDGE Unilateral Diverging Seated Vertical Row can break down to fit through a 36-inch wide door. This all translates to easier setup and less maintenance, plus affordability.

Two-tone powder coat and upholstery is standard on all LeverEDGE pieces.
