Part 6009

UNILATERAL DIVERGING HIGH ROW

Cable rows and vertical rows focus on the middle of the back. Lat pulldowns focus on the outer portion of the lats. The LeverEDGE Unilateral Diverging High Row mimics the old school 45-degree row to hit somewhere in between. Heavy lifters can load up to nine plates on each lever arm. There are also six chrome-plated Olympic bar-sized weight storage pegs. This keeps plates handy for rapid adjustments between sets, and also keeps the gym floor clear.

SMOOTH, UNILATERAL DIVERGING ACTION

The LeverEDGE Unilateral Diverging High Row boasts a carefully-balanced diverging lever motion. Heavy-duty pillow block bearings are tough as nails and smooth enough to never get in the way of a workout. Lubrication nipples make for easy maintenance. Scroll down to see it in action.

SUPREME COMFORT AND ADJUSTABILITY

Like the rest of the LeverEDGE line, the cockpit of the LeverEDGE Unilateral Diverging High Row is super adjustable. It features four different positions in two-inch increments for the seat and sternum pad, plus 11 positions in one-inch increments for the thigh pads. Add in multi-grip closed-cell foam handles and two two-position chrome-plated foot pegs, and all of this combines to make sure your next back workout feels right. The LeverEDGE High Row is ready to help users in a variety of sizes get a back workout they might not have had before.

BUILT LEGEND STRONG

Designed using 3D CAD software to minimize the use of fasteners, assembly only requires six bolts. This makes for easier setup, less maintenance, and extra rigidity.

Two-tone powder coat and upholstery is a no-cost option on all LeverEDGE pieces.
